CIRS was founded in 1983 to improve upon existing tissue simulation methodology and provide quantitative reference standards for Computed Tomography. Today CIRS is recognized world wide for tissue simulation and is a leading manufacturer of phantoms and simulators for quantitative densitometry, calibration, quality control and research in the field of medical imaging (X-ray, ultrasound, magnetic resonance) and radiotherapy.

Our product line now features products that we believe offer high quality solutions for the current needs of the medical community. The following products have been discontinued, and are no longer available:
